

Apps are distributed as .bapp files.

The *.bapp file package, containing manifested information, app icon and other applicable data necessary for the app to install and run in a Docker container.

Install procedure:

- Add the .bapp file to a USB flash drive, stored in a folder, "papps" residing on the root of the USB memory.
- Attach the USB memory stick to the X2 web device and login to the as Admin.
- From the Apps tab, select Add app button and select the App to install by clicking on the Install button.

File path examples:

- Linux: /media/[linux-user]/[usb-name]/papps/webiq.bapp
- Windows: D:\papps\webiq.bapp
